

AI Readiness Advisory

TMaaS Agent A — DQ Digital Transformation Assessment

RESPONDENT

Test Respondent

ORGANISATION SIZE

50-200

RESPONDENT ROLE

Operations Director

ASSESSMENT DATE

1 June 2026

ORGANISATION

Fixture Org

SECTOR

Food & Beverage

PRIMARY USE CASE

Demand forecasting for fresh produce

SESSION REFERENCE

00000000-0000-4000-8000-000000000099

1. Executive Summary

Foundation Needed

Score: 10 / 14

The organisation has a clear demand forecasting goal with usable historical sales data, but systems integration remains partial.

Your organization has energy and intent, but critical structural gaps need to be addressed before AI can deliver reliably.

Dimension Scorecard

DIMENSION	SCORE	STATUS	ASSESSMENT
Systems Integration	1	PARTIAL	Some foundation exists, but gaps remain before reliable AI delivery.
Data Accessibility	1	PARTIAL	Some foundation exists, but gaps remain before reliable AI delivery.
Data Quality	2	STRONG	Historical sales data available.
Use Case Specificity	2	STRONG	Adequate capability for the current readiness level.
Implementation Capability	1	PARTIAL	Some foundation exists, but gaps remain before reliable AI delivery.
Adoption Conditions	1	PARTIAL	Some foundation exists, but gaps remain before reliable AI delivery.
Leadership Sponsorship	2	STRONG	Adequate capability for the current readiness level.

Biggest risk: Systems integration gaps

2. Critical Blockers

BLOCKER: Systems integration gaps

Severity: High

Root cause: ERP and inventory systems are not fully integrated.

Resolution: Map integration path with IT owner.

3. Recommended Use Case

Indicative cost bands are catalog benchmarks only — not confirmed business case figures.

AI demand forecasting

Readiness: Foundation Needed | Complexity: Medium | Cost band (benchmark): QAR 80K–200K implementation

Matches the stated demand forecasting problem and available sales history.

Data requirements: 12+ months sales history.

Key risks: Data continuity risk

Delivery approach: Evaluate build vs buy during scoping.

4. Immediate Next Action

Validate sales and inventory data exports with the ERP owner within 30 days.

Priority 1 (Days 1-7): Confirm ERP export fields with IT.

Roadmap highlights

Horizon	Timeline	Action
Immediate	Days 1-30	Validate data exports.

5. Evidence Appendix

Assumptions

- Single discovery session only.

Key Risks

Risk	Likelihood	Impact	Mitigation
Forecast accuracy limited by manual data pulls	Medium	High	Prioritise ERP integration mapping.

Constraints: No direct system access during assessment.

Session Evidence

DOCUMENT — DATA_QUALITY_HISTORY
12 months of historical sales data by SKU.

DOCUMENT — DATA_ACCESSIBILITY

ERP exports available weekly for sales and inventory.

CONVERSATION — SYSTEMS_INTEGRATION

Inventory and ERP are partially integrated via manual CSV loads.

CONVERSATION — USE_CASE_SPECIFICITY

Primary goal is demand forecasting for fresh produce categories.

CONVERSATION — ADOPTION_CONDITIONS

Store managers support forecasting pilots with training planned.

CONVERSATION — LEADERSHIP_SPONSORSHIP

Operations director sponsors a bounded 90-day pilot.
